This text provides the first comprehensive treatment of the methodologies underlying neuro-fuzzy and soft computing, an evolving branch within the scope of computational intelligence. The book places equal emphasis on theoretical aspects of covered methodologies, empirical observations and verifications of various applications in practice. *The book is oriented toward methodologies that are likely to be of practical use; many step-by-step examples are included to complement explanations in the text. *Specially designed figures provide a visual reinforcement for as many ideas and concepts as possible. These figures were generated using MATLAB and these MATLAB files are available via FTP or WWW. *Includes exercises, some of which involve MATLAB programming tasks which can be expanded into suitable term projects. This will provide the student with hands-on programming experiences for practical problem-solving. *Each chapter includes a reference list to the research literature. This will enable students to pursue individual topics in greater depth.
